NEXT Black Sea Basin

BSB00001 Small scale project

IMPACT+

Improving Emergency Response Capacities to Natural and Man-made Disasters in Small Communities across the Black Sea Basin Region

Overview

The Black Sea Basin region faces significant challenges due to its susceptibility to natural disasters and climate change impacts, particularly in small communities. These communities lack adequate prevention, acknowledgement, and training activities, leading to longer response times. The project aims to enhance disaster risk prevention, climate change adaptation, and emergency response capacities in these communities, focusing on rural areas.

Road Ahead

- Joint Study Visit to showcase best practices in disaster management in the cross-border area
- Community needs assessment for effective resource allocation for disaster prevention
- E-Learning Web Platform and a Common methodology to improve preparedness for emergency situations in rural areas
- Cross-border cooperation network in disaster management
- Capacity Building on disaster risk prevention and management for community resilience
- Reforestation campaigns for community mobilisation to plant at least 300 trees
- Emergency situation simulation exercises to mobilise the local population while facing the consequences of natural disasters effectively

Partnership

Lead partner: National Society of Red Cross Romania - Galati Branch

Partner 2: Cross-border Cooperation and European Integration Agency

Partner 3: Union of Bulgarian Black Sea Local Authorities

Partner 4: Imereti Scientists' Union "Spectri"
