STEP2CleanPlan

Cooperation for Sustainable Energy and Climate Actions' Planning and Monitoring in BSB

Overview

The project aims to enhance local decision-makers' ability to plan strategically in line with national climate adaptation plans and support existing local plans. Cities contribute to pollution and climate change but can also be role models in driving climate adaptation and the energy transition. However, many municipalities lack the capacity to develop and implement such plans, particularly in border regions.

Road Ahead

- Joint analyses of the existing local strategies for climate adaptation
- Joint Guide for local policy-makers and best practices in planning and implementing mitigation efforts for climate change
- Mentoring program for local and regional policymakers for climate adaptation planning
- Capacity Building program for the local authorities' experts for climate adaptation strategies
- Frameworks and plans for mitigating the negative effect of the climate change in the fields of energy efficiency, sustainable urban mobility and decreasing carbon footprint

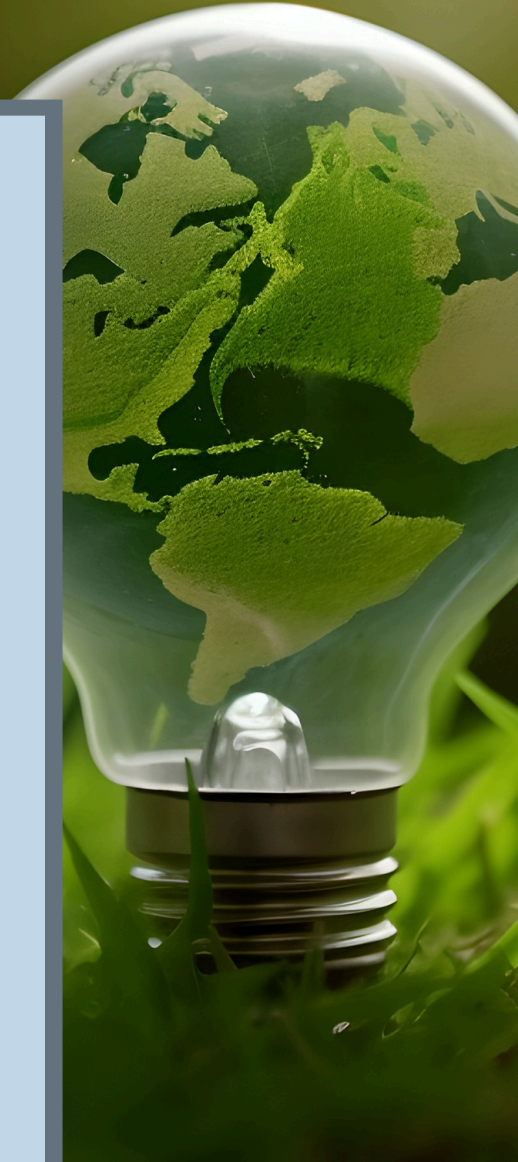

Partnership

**Lead partner: Uzunkopru Municipality
Administration**

**Partner 2: Anatoliki S.A. Organisation for
Local Development**

Partner 3: District Government Burgas

Partner 4: Association Bionetwork

Contact: yaziisleri@uzunkopru.bel.tr
